#### Analisis de la presencia de dietistas-nutricionistas en hospitales de Andalucía

##### PALABRAS CLAVE

Dietista-Nutricionista;  
Sistema Sanitario;  
Atención Primaria;  
Unidades Hospitalarias;  
Salud Pública;  
Equidad en Salud.

**RESUMEN**  
**Introducción:** La figura profesional de referencia en el tratamiento dietético en el ámbito hospitalario es el Dietista-Nutricionista (DN). Su interés público coincide con los datos sobre su actividad y eficiencia clínica. El objetivo es describir su presencia en hospitales públicos y privados de Andalucía y analizar en qué medida se cumplen los criterios de la Declaración de postura de la Asociación Española de Dietistas-Nutricionistas (AEDN) sobre la incorporación del DN en el Sistema Nacional de Salud de 2009.

**Material y Métodos:** Se seleccionó como muestra hospitales públicos y privados del Registro de Centros, Establecimientos y Servicios Sanitarios de la Consejería de Salud y Bienestar Social. Se les contactó por vía telefónica y telemática, preguntando: servicios con los que cuenta, número de DN totales, unidades con DN y cantidad y número de camas. Los datos se compararon con la propuesta al Senado de la AEDN de 2009.

**Resultados:** Se incluyeron 105 centros, de los que 57 eran públicos y 48 privados; contestaron 51 (48,6%), 31 públicos (54,4%) y 20 privados (41,7%). Se registraron 35 DN contratados, 31 en hospitales públicos (88,6%) y 4 en privados (11,4%). Exceptuando hospitales privados en Granada (20%) y Málaga (12,5%), el grado de cumplimiento del criterio estudiado es de 0% en el resto de Andalucía.

**Conclusiones:** La presencia de DN en hospitales públicos y privados de Andalucía no cumple la propuesta presentada al Senado en 2009 por la AEDN. Hacen falta más estudios para observar la situación en distintas comunidades autónomas y describir la situación profesional de DN en hospitales.

## Los suplementos de Nutrición Hospitalaria

J. M. Callebras\* y A. García de Lorenzo\*

Sociedad Española de Nutrición Parenteral y Enteral (SENP): España.

\*Director de Nutrición Hospitalaria. Redactor Jefe de Nutrición Hospitalaria.

El Órgano Oficial de SENPE, Nutrición Hospitalaria, no ha parado de crecer y prosperar a lo largo de sus 26 años de existencia. Hoy en día es una revista muy leída en el mundo médico y en el mundo hospitalario, con un hueco mercierto en las bases de datos electrónicos y repositorios, alcanzando a miles de lectores interesados en su temática. La revista es una revista científica que también en países de ámbito sajón y en otros muy lejanos. El éxito ha traído paralejo un incremento de origenes, que se refleja en la cifra de más de 1000 páginas publicadas. La creciente exigencia de los revisores, reclamando en treinta por ciento de los artículos recibidos, ha sido implementado para esta proyección, de lo contrario.

Otro de los éxitos positivos de este éxito editorial ha sido el aumento de números suplementarios de *NUTR HOSP*, que han permitido la realización de simposios, cursos, eventos o conclusiones de grupos de trabajo. La proliferación de los suplementos, muy halagada a la vez por la calidad de los mismos, ha sido una de las principales devoluciones de la escuela de la revista.

Vaya por delante que todos los suplementos han cumplido con la normativa de publicación de la revista y por la SENPE, pero lo que escapaba al ámbito del comité editorial era la garantía de originalidad de todos los artículos. La necesidad de una revisión estructurada de acuerdo con las normas de publicación de la revista y, lo que es más importante, la falta de revisión por parte de sus contendidos.

Este último contradice formalmente la esencia de una revista científica. Por ello, Nutrición Hospitalaria

y su comité editorial se encontraron ante un dilema: si se renuncia a la edición de suplementos que cumplen con la normativa establecida, se pierde el prestigio muy importante a la sociedad. Si se continua, incumplimos la normativa de revisión por parte de los revisores.

Hemos consultado los estatutos científicos internacionales y rápidamente encontramos la solución, que consiste en la creación de un grupo que hace uno o dos años: los suplementos deben aparecer bajo la cobertura de un ISSN diferente, llevando su propia publicación correlative, en volumen independiente. Esta solución ha sido propuesta la primera vez, ha sido referendada por el Comité Científico y la Junta Directiva de la Sociedad, y empezará a implementarse a partir de la edición de mayo.

Así, el lector recibirá, a lo largo de los próximos meses, suplementos de *Nutr Hosp* ligeramente distintos, que cumplirán con la normativa de revisión total y estarán avalados por el Comité Científico Editorial y la Junta Directiva de SENPE.

De igual modo, queremos señalar que, como decímos, está ampliamente implantada en otras revistas científicas, se proponga la multiplicación de los suplementos, que cumplen con la normativa de revisión, redundará en beneficio de los miembros de SENPE y de nuestros lectores en general, sin menoscabo de las características referentes a originalidad y control que se exigen a los artículos que se publiquen en Nutrición Hospitalaria.

PRADO, S.D.; BOSI, M.L.M. Food and Nutrition in Collective Health: constitution It is, contours and statutes. In other words, the emerging field of NCI contributes to the relativization of the dominant model and the energetic-quantitative perspective of Nutrition, which underpin the modern notion of what is a healthier food. Studies of Philosophy and History of Biomedical Sciences Florianópolis: Editorial Speech, 2006. Though cannot be considered a rationality or current, but, yes, a food attitude, already inserted in some practices and rationalities, it can be stated that the consumption of food produced under the Agroecology Ethics should be fostered in all the health food proposals. 2010. Ministry of Health. Its diffusion begins in the 1980s, in the United States, due to the work of Ann Wigmore, whose basis comes from the studies of the hypocritical diet. Its recognition helps in the perception and understanding of other perspectives, including, potentially, those related to users, strengthening the proposal of an extended approach to health, nutrition science and food practices. Such an interface, seen in this dual focus, is little known and explored both in the academic and professional environment, in Nutrition and Collective Health. Nutrition; Complementary therapies; Primary care health; Food and nutritional insurance. Tiente by object la existencia poco estudiada de otras razones nutricionales que no sean biomédicas, comúnmente insertas en las llamadas prácticas tradicionales o complementarias. To do this, the authors highlight the urgent need for dialogue between different disciplines, with the look of human sciences and health to the professionals of nutrition, with a view to generating another interpretation and understanding of food culture and its social representations. p.175-89. Luz(2000) developed an Analytical Approach that has allowed fan approach to the broad universe of PIC, expanding thinking about it and relativizing the biomedicine paradigm: The Mother Rationality category - which can be understood as an integrated set of practices and you know composed by the following dimensions: human morphology, vital, diagnostic system, therapeutic system and motion doctrine, based on a cosmology. Revising the origins of the dominant can contribute to the different meanings present in the concept of healthy, an obstacle and controversy field of study of nutrition, perceived as a social construction historically permeated by risk, with social and political determinants (AZEVEDO, 2008). SOCIOLOGY IN THE LONDON MENU: Routledge, 1997. é e c - Yes. The object of other nutritional rationalities of the distinguished biome, synchronized in the calls and traditional medicines and/or opinions is taken as objects. STARFIELD, B. Freitas et al. (2008) propose a humanistic reading of the science of nutrition, in which the professional takes into account the representations and interpretations of the subject of his food, your body and your reality. Nestle, M. Nutrition and promotion of the health: current perspectives. Attentive Primaria a la Salud. As mentioned, the universe of NCI is formed by manufactured models discussions, associated with other rationalities, traditional or newer tips, practices and currents. In: Brazilian Congress of Collective Health, 8., and World Congress of Páblia, 11., 2006, Rio de Janeiro. Public Health, v.27, n.1, p.7-18, 2011. 36 ed. The socio-cultural aspects of nutritional education, analyzed by Freitas (1997) in the 1990 period, comparative reflexes the tendency of the orientation It must already include the social, economic, cultural and food aspects, including the symbolic aspects of the body. Secretariat of Attention to the Saá of, Department of Attention Bons, CAD, Campinas, São Paulo, SC, Brazil, SA E o Paulo: Gaia, 1994. Acupuncture, the use of medicinal plants, body practices such as Tai Chi Chuan and Lian Gong, and entities between the most used techniques. In its construction, they point out as influences of the agri-food system, the foodstream and marketing, high science (AZEVEDO, 2008; NESTLE, 2002). To achieve this objective, based on the system of the current and directed system of the current literature, it is published, published, a succinct discussion that rescues some crucial aspects of the biomedicine model more specifically, in nutrition, addressing the characteristics of the Saá, the practical and the formation of the professionals, aspects for our goal, and arguing for the need to expand this perspective and evaluate the quality of the professional practices. This becomes more important from the verification that the food is directly or physically involved in the prevention of high morbidity and mortality. Health Colet., V.16, n.1, p.155-63, 2011. This educational area urgently attentive to promote in the nutritional educational practices in the SUS, respecting the different knowledge and contexts, in collective construction of knowledge and practical. The others, herbal medicine/medicinal plants, vegetarianism and living feeding, as well as the consumption of ecological foods, can be considered practical that reveal an individual attitude and a social environmental and political posture, inserted in some of the attached rationalities, pervading them partially and not. In addition to these chronicles, sociopolitical aspects must be taken into consideration in particular, around the social representation of food (saints, saints, saints, 2001). Published in a collection 228 An, 2012 Date of Classification: Jan 1, 2001 Out of Public Health, Public Health, v.14, aférence n.3, p.629-36, 1998. The Hypothesis is that they can be eating rationalities that are relevant to themselves. Dislike to Be Studied and May contribute to promote food security, health education and the enrichment of Professional Practices in Brazil System São Paulo (SUS - National Health System). Informed work, the same author and his employees assert that, in normative conduct, the patient tends to receive the diet as if it were a drug or novum (Freitas et al., 2008).
